

# CORTEX

Machine for the production of **webbing**, **caged webbing** and **CORDS**.

The name comes from Cor= "cord" (rope), "core" (yarn), "tex"= textile, "Cortex"= cortex (cerebral) is the part of the brain that controls cognitive functions= Stimulates the brain.

1

Industries:  
• Trimmings  
• Fashion

2

Collection on 10" rock through electronic yarnguide.

3

Grooved spindles for different sizes of spindles that adapt to customer needs.

4

Feeding by yarn through external reel.

5

Through PC Touch Screen you can enter and save all the work data and technical parameters of the final yarn and control the machine's functionalities.

The PLC manages the precise execution of the data, ensuring the exact speed of the axes in a millesimal measure with exceptional results on the quality of the effects of the final product. Extremely easy to enter and edit general data in a step-by-step or quick mode. Diagnostics for the detection of the state of the machine.

## TECHNICAL DATA

Gauge [mm]

---

Spindles/section

---

Max No. spindles

---

Max needle head speed [rpm]

---

Collection: ring tube

---

Installed power [Kw]

---

Absorbed power

50-60%

---
